Bob --

Just got a call from Bob Stone who just got a call from a school administrator in Casper. Seems some teachers at East Junior High at 900 S. Beverly in Casper have become concerned about a couple of staffers who have contracted cancer. They think the cancers could be related to an old refinery that operated in the area before WWII. The teachers have contacted Linda B to help them!

Stone told this administrator (Herman Boner) to write a letter to you, enclosing a map of the area and outlining the concerns. The area looks like it's about 48 sq. blocks in the middle of Casper. Rushton suggested that the school might have asbestos, as well.

Be prepared to hear about this soon, not only from the school administrator, but also in the media. Stone says to tell them that the school district has contacted EPA and that we are looking into the matter. See other side for other details.

mn

C.S. Let me know what we plan to do so we can plan some pro-active stuff. Don't want this to get totally out of hand again!
